EDUCATION

Northeastern University

Boston, MA

Candidate for a Bachelor of Science in Computer Science and Mathematics (Hons.)

Sep 2022 – May 2026

GPA: 3.98/4.00

Relevant Coursework: Algorithm and Data, Object-Oriented Design, Theory of Computation, Logic and Computation, Introduction to Computer Science Research, Linear Algebra, Calculus 3, Statistics and Stochastics Processes, Fundamentals of Computer Science I/II (Accelerated)

Course Assistant: Calculus 3

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, Rust, SQL

Frameworks: React, Next.js, Node.js, Express.js, Prisma, Tailwind, Jest

Databases: MySQL, PostgreSQL, MongoDB

Tools: Git, Docker, GitHub Actions, Postman, Linux, Bash, CI/CD

EXPERIENCES

Software Developer

Sep 2023 – Present

Sandbox at Northeastern

Boston, MA

- Developing a full-stack application for the College of Arts, Media, and Design at Northeastern to collect, aggregate and visualize faculty involvement data for 100+ faculty members.
- Utilizing Next.js, Prisma and Postgres for building the REST API endpoints and integrating serverless functionality along with NextAuth for user authorization and authentication.
- Collaborating with a cross-functional team for standup meetings, code review, and application optimization.

Software Developer

Mar 2021 – Apr 2021

Omnino Solutions

Mumbai, MH, India

- Developed an end-to-end automation pipeline that streamlined life insurance policy management, resulting in a 35% reduction in manual data entry tasks and significantly improved data accuracy for over 10,000 policy records.
- Designed and implemented a cutting-edge Python-based OCR system, achieving a remarkable 98% accuracy rate in extracting critical information from national identification cards, accelerating the customer onboarding process.
- Conducted rigorous unit testing and seamlessly integrated the developed solutions into the production environment.

Project Lead

May 2020 – Oct 2020

Collegey

Mumbai, MH, India

- Spearheaded a team of three developers in the successful creation and deployment of a full-stack website for COVID-19 diagnosis based on chest X-rays, achieving a 91% accuracy rate in identifying potential cases.
- Leveraged the VGG-16 architecture in TensorFlow to implement an accurate diagnostic model with an impressive F1 score of 0.91, seamlessly deploying the model as a web application through the Django framework.
- Established dialogue with 15+ medical practitioners to gather critical clinical feedback on the end product.

PROJECTS

SimuTrade | *Express.js, Docker, Prisma, Postgres, JWT, TypeScript*

Sep 2023

- Developed a robust RESTful API for managing and trading simulated stocks and portfolios.
- Containerized the application using Docker, streamlining future deployment and scalability.
- Implemented JWT-based security for data integrity and user privacy.

ShrinkIt | *React, Express.js, Node.js, MongoDB, TypeScript, ChakraUI, Tailwind*

Aug 2023

- Developed a high-performance URL shortening application, using the MERN stack.
- Utilized TypeScript to enhance code quality, maintainability, and ensure a type-safe development environment.
- Designed an intuitive user interface with ChakraUI, offering a responsive and user-friendly experience.

Premiere League Dataset | *Selenium, BeautifulSoup4*

Sep 2020

- Created an efficient Selenium-based web scraper to compile English Premier League player statistics
- Published the dataset for public use, receiving 17K+ views and 2.5K+ downloads.
- Facilitated in-depth exploratory data analysis of soccer player statistics within the sporting community.
